Dictation, Transcription, Speech Recognition, Computer-Assisted Coding & CDI Solutions
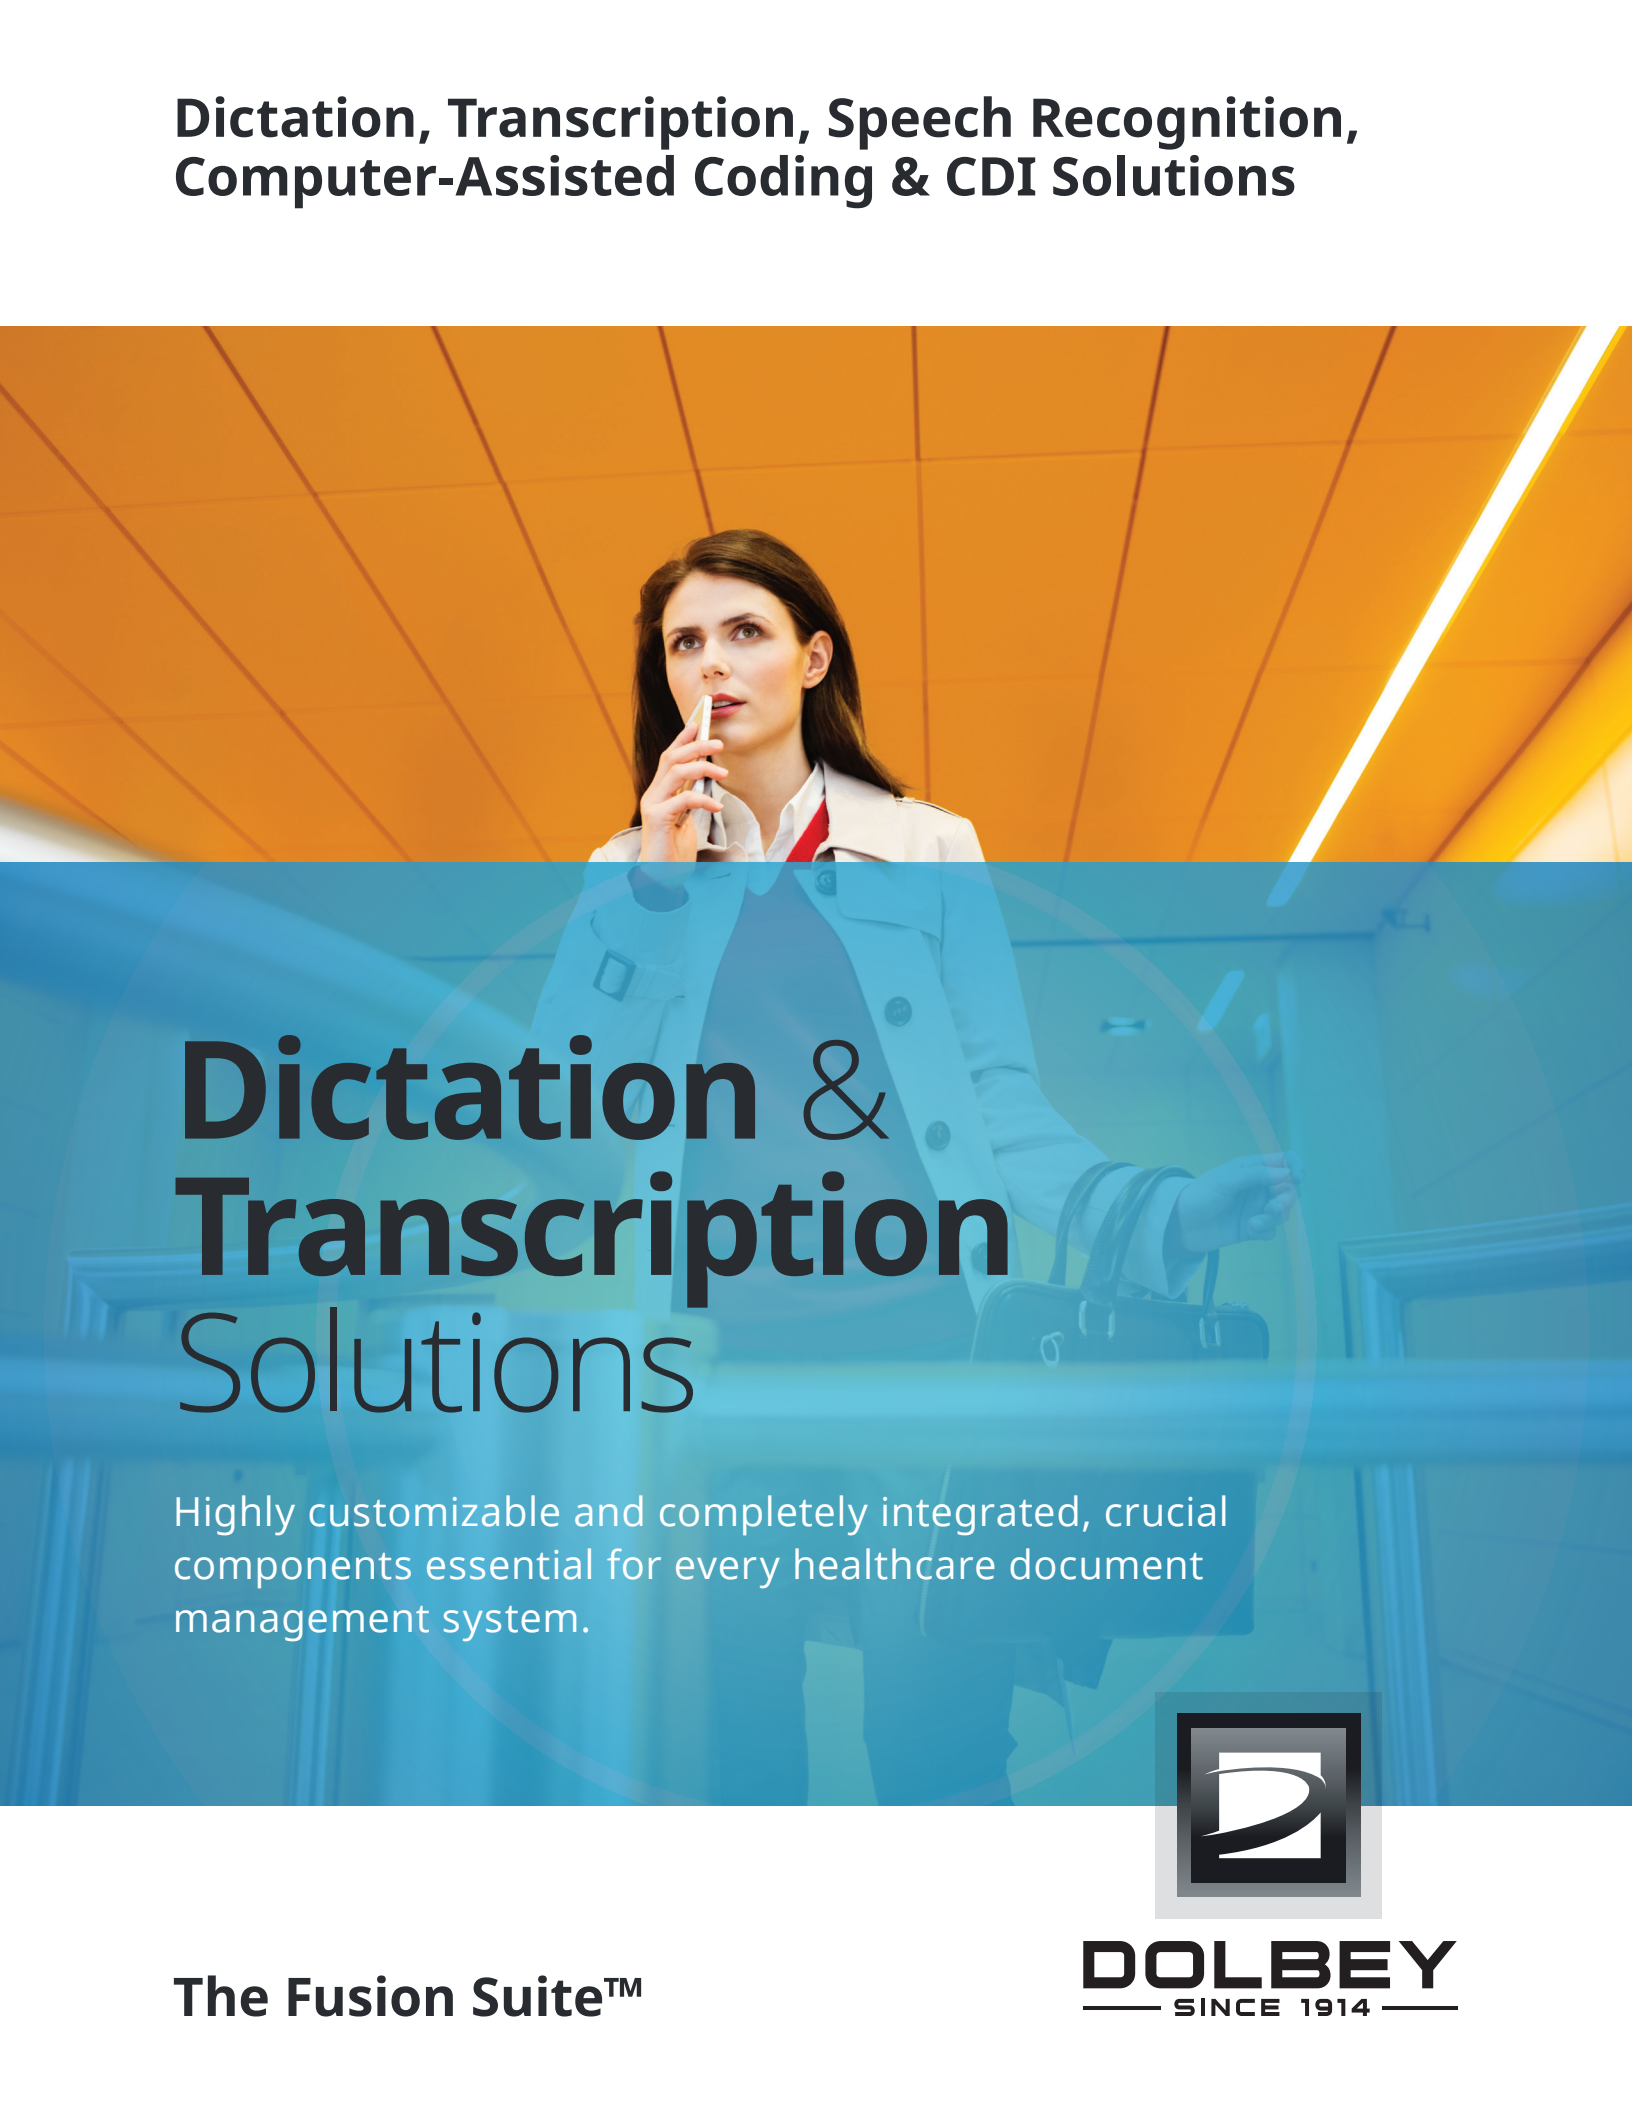

Dictation & Transcription
Solutions

Highly customizable and completely integrated, crucial components essential for every healthcare document management system.

The Fusion Suite™

DOLBEY
— SINCE 1914 —

Fusion Voice Digital Dictation

The quality of a patient's chart relies upon the clinician's ability to effectively communicate findings, plans and progress. A reliable and accessible dictation workflow is essential, and Fusion Voice provides this platform.

World-class health systems and community health providers find that Fusion Voice® can be tailored to meet their unique needs. The Fusion Voice Dictation System provides a scalable architecture to accommodate growth. An exclusive, fault-tolerant design provides high availability. System partitioning provides a single system image that can be shared by many facilities and departments without compromise.

Fusion Voice also offers built-in transition tools to impelment speech recognition when the technology is right for your physicians and your infrastructure is ready to support it.

Transparent Technology

Fusion Voice, with any degree of customization, can integrate with your existing IT solutions through a series of built-in tools. Instead of teaching your staff how to use the system, teach the system how the users work. Take advantage of keystroke and process savings through simple integrations; download the physician's schedule to their dictation device to save button presses, let the EMR or PACS workstation identify a study to save scanning a barcode, and let Fusion Voice update report statuses to departmental chart tracking systems to save manual data entry.

By providing advanced, intuitive features to assist a busy workforce and accommodating a remote, and possibly global users, you are ready to meet inevitable change with these advanced dictation solutions.

Why choose the Fusion Suite?

Adaptable

Fusion Voice builds on the traditional methods of digital dictation. Support includes telephones, dictate stations, and digital portables as well as dictation options for smart phones, PC-workstations, and VoIP. Support one or all in the same installed solution.

Reliable

To ensure business continuity in the event of computer or network failures, our exclusive Fault Tolerant Module (FTM) is essential to mission critical deployments. By distributing the processing and data storage across multiple servers, even in different geographic locations, Fusion Voice provides single-view management with zero downtime expectation.

Secure

An essential component in HIPAA/HITECH planning is providing a highly accessible dictation reporting system while maintaining the safeguards required to protect health information.

Fusion Voice logs all events, tracks all access and can even alert you if a breach has potentially occurred. Encryption ensures delivery of dictation from end-to-end without worry.

Flexible

Today's healthcare providers must have a revenue strategy. To meet the individual needs of healthcare providers, Dolbey offers multiple financial options. Whether you want to buy and own your dictation solution or take advantage of our SaaS options, Fusion Live or Atom Live, our cost-effective solutions will offer a return-on-investment that would satisfy even the most discerning financial analyst in your organization.

Fusion Text Transcription and Editing

Highly productive, customizable and completely integrated; an essential transcription solution for every healthcare document management system.

Dolbey transcription software is recognized as the industry leader for its state-of-the-art features, exceptional support, and high degree of customer satisfaction. Extend in-house functionality to remote workers with ease while maintaining control. Manage reports from dictation to signature and distribution to final document archival in this highly customizable and feature-rich system.

Key components of Fusion Text® enable transcription/editing teams to work faster and easier with greater precision than ever before. Speed typing, customized formats, medical spell checking and stored routines are highlights of the tool kit and are easy to learn for all transcription staff. Integration with patient registration, demographics and order systems eliminates redundancy while ensuring the integrity of the data as it is passed from Fusion Text to your Health Information System or EMR.

Productivity

Transcriptionists will experience a significant increase in daily line production by using the Fusion Text productivity tools. Fusion Text productivity tools include a medical and pharmaceutical dictionary, spell check, addendum tools, report search, keyboard shortcuts, and personal and global report normal . These tools combine to create an environment for speed and quality.

Reporting

The Custom Management Report features rich data with customized views that focus on tracking productivity, employee time, work volume and trends. Design your own report in Fusion Text by selecting the columns, grouping levels, sorting, criteria, and various other options. Output detailed lists or create quick executive summaries including color charts and graphics.

Integration

By integrating ADT and orders data into the Fusion system, transcription staff will gain productivity while assuring the consistent reliability of chart demographics. After documents are typed, Fusion Text can send entire reports, report elements or discreet data, to your Electronic Health Record, Health Information System or departmental system. Dolbey's experience has led to established integration with nearly every major software vendor in the healthcare industry.
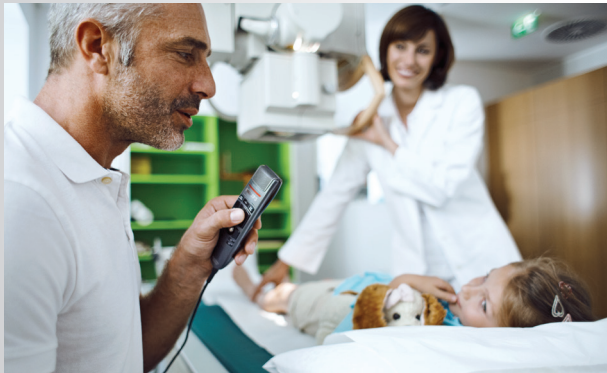

What is
the Fusion Suite?

Dolbey's award-winning healthcare suite of solutions improve productivity while delivering better documentation which improves patient care. Since 1914, Dolbey has consistently evolved its products incorporating the latest technologies available to meet the demands of the healthcare community. Today, our suite of products includes Transcription, Dictation, Speech Recognition (premise or cloud-based), CAPD, CDI, and CAC.

Experience more accurate documentation, healthier patients and better revenue cycle with Dolbey.

Speech Recognition

Fusion Speech® powered by SpeechMagic™ proves that speech recognition is a productivity tool for transcription.

When dictations are processed first through the speech recognition engine, transcription more closely resembles editing. Transcriptionists' edits then fine tune the speech recognition dictionary for continuously improved accuracy.

Flexible report distribution reduces manual effort and provides essential audit trails and logs of where and to whom patient information has been sent. With Fusion Speech, you can print real-time or to patient floors, fax to multiple destinations determined by recipient preferences and even email reports to ordering and attending physicians with secure encryption and password protection.

Cinicians can securely and quickly access their reports through an internet browser from home, office, hospital, or off-site, then view, sign, and edit the reports to speed document turnaround and availability. The iDocview™ module allows organizations to sign documents that require multiple signatures and more complex signing relationships. With configurable rules, even the needs of academic facilities can be met.

Since 1914, Dolbey has provided voice recording and document management solutions designed to help healthcare organizations improve workflow, boost productivity and increase profitability.

The Fusion Suite platform is Dolbey's line of award-winning software products that includes dictation, transcription, speech recognition, clinical documentation improvement and computer-assisted coding technologies. Together they deliver an end-to-end solution that creates more accurate reporting of critical data elements and improves documentation, reimbursement and patient care.
